Name: ShowApp

Description: an app that keeps track of premiere/air dates of current and upcoming tv shows, reminds you in advance when these shows will air/be released, provides links for detailed information on the shows, and add comments on said shows.
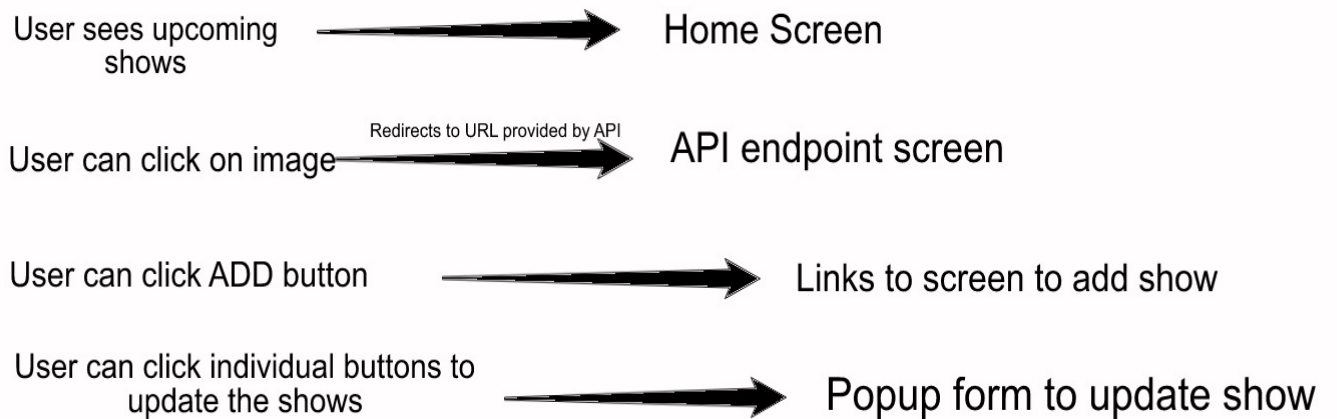

MVP(minimum viable product)

USER STORIES:

- *As a user, I should be able to see the list of shows either on or coming up.*
- *As a user, I should be able to add shows.*
- *As a user, I should be able to update the shows.*
- *As a user, I should be able to receive the reminders.*
- *As a user, I should be able to click on the show and get more information via TMDb (The Movie Database) API.*
- *As a user, I should be able to leave comments to the movie.*
- *As a user, I should be able to sign up for the app*
- *As a user, I should be able to log in to the app*
- *As a user, I should be able to reset my password*

SCREENS:

- Screen for *showsfeed* (might add the sign up/login form, comments)
- Screen for adding shows
- Popup form for updating shows
- Screen for redirected URL from API.

USER FLOWS:

ShowsFeed

User sees upcoming shows $\longrightarrow$ Home Screen

User can click on image $\longrightarrow$ API endpoint screen

Redirects to URL provided by API

User can click ADD button $\longrightarrow$ Links to screen to add show

User can click individual buttons to update the shows $\longrightarrow$ Popup form to update show

Add Shows Screen

User sees blank form $\longrightarrow$ It has title, date, and URL or image

User fills in form $\longrightarrow$ Must fill in every form field

User clicks ADD $\longrightarrow$ Show is added to DB and redirected to ShowsFeed

Update Shows Popup Form

User clicks UPDATE button ⟶ Form pops up

User can now update all fields ⟶ Can change title, date, and URL

User clicks UPDATE ⟶ Show is updated in DB and redirected to ShowsFeed screen
